EDUCATION

Chitkara University

Bachelor of Engineering in Computer Science Engineering, CGPA: 8.6

Punjab, India

Aug 2024 – May 2028 (Expected)

EXPERIENCE

Outreach Executive

2024 – Present

IEEE-CIET Student Branch

Chitkara University, Punjab

- Spearheaded outreach initiatives by coordinating with external speakers, industry professionals, and organizations to drive meaningful collaborations and strategic partnerships.
- Planned and executed end-to-end technical events, workshops, and tech talks, significantly boosting student engagement and community participation across campus.
- Managed professional outreach communications and email campaigns to establish and sustain long-term relationships with companies and academic institutions.
- Collaborated cross-functionally with internal teams to align outreach strategies with the branch's vision, enhancing society visibility and student reach.

PROJECTS

CareerLens | *React.js, Node.js, Express.js, MongoDB, JWT Authentication*

Feb 2025 – Present

- Architected a full-stack career resource platform enabling users to upload, manage, and share PDF resumes with a seamless content discovery and interaction experience.
- Engineered JWT-based authentication with secure session management, ensuring protected access and a fully personalized experience for every user.
- Designed and implemented RESTful APIs for PDF upload, retrieval, likes, and ratings — enabling rich user-to-user engagement and transparent profile evaluation.
- Leveraged MongoDB for efficient, scalable storage of user profiles and documents; deployed frontend on Vercel and backend on Render for production-ready availability.

ReliefSync | *React.js, Node.js, Express.js, MongoDB, JWT Authentication*

Mar 2025

- Built a disaster management and emergency coordination platform supporting multi-user incident reporting, priority-based tracking, and structured response workflows.
- Developed RESTful APIs for structured incident submission capturing title, description, location, and priority level — enabling efficient emergency triage and rapid coordination.
- Implemented multi-user coordination features allowing teams to collaborate on disaster response with clearly defined task routing and real-time status tracking.
- Utilized MongoDB for reliable, low-latency data storage; deployed on Vercel and Render for scalable, high-availability performance under high-demand emergency scenarios.

Talkify | *React.js, Node.js, Express.js, WebSockets, Prisma ORM, NeonDB*

- Engineered a real-time chat application using WebSockets for instant, bidirectional communication with minimal latency across multiple concurrent users.
- Designed and developed both frontend and backend from scratch, delivering a responsive UI and a robust server-side messaging and session management architecture.
- Implemented secure user authentication and session handling to deliver a private, persistent chat experience across multiple devices and sessions.
- Utilized Prisma ORM with NeonDB (serverless PostgreSQL) for type-safe, efficient persistence of user data, message history, and session records at scale.

TECHNICAL SKILLS

Languages: Java, JavaScript, C++, Python, SQL, HTML, CSS

Backend: Node.js, Express.js

Tools & Platforms: Git, GitHub, Postman, Vercel, Render, VS Code

WebSockets, Full-Stack Development

Frontend: React.js, Tailwind CSS, Material-UI

Databases: MongoDB, PostgreSQL, NeonDB, Prisma ORM

Concepts: DSA, REST APIs, JWT Authentication,

HONORS & ACHIEVEMENTS

- Solved **320+** **Data Structures and Algorithms** problems across competitive programming platforms, demonstrating strong algorithmic thinking and consistent problem-solving discipline.
- Cleared the **Internal Smart India Hackathon (SIH)** selection round, advancing among top university teams with an innovative, solution-driven project proposal.
- Participated in multiple hackathons including **Hack With Her 4.0**, securing a **Top 7** finish — collaborating under time constraints to design and deliver a technical solution addressing real-world challenges.
